Subject: NWOD Oil Sheen and Downstream Assessment Programs

Hi Kathy -

Thank you for forwarding these two plans to us for review. We would like the plans to incorporate the following considerations.

Oil Sheen Control Plan:

1. It was noted in the November 8th meeting that the sorbent boom material may not be effective against the types of oils being released, therefore the Group (SLCity, BP and Chevron) should verify that the sorbent boom material is the right material for the released oils.
2. The Group should install, inspect and maintain a boom at the Cudahy Lane bridge.
3. There should be daily inspections (forms, etc.) of all booms, pads, curtains, etc.

Downstream Assessment Program:

1. The County shall be notified when there is a release. The first we heard of this release was your November 27th email.
2. After the Group's removal activity is complete, the County will sample sediment in segment 4 using the same techniques, laboratory, equipment, etc. as were used for confirmation sampling already undertaken by the County. Costs for sampling will be borne by the Group.
3. Samples shall be taken at sites previously sampled by the County, specifically at stations 160+00, 220+00, 230+00 and 295+00, and will be analyzed for TPH-DRO, O&G and USC (uniform soil classification).

If you have questions regarding these considerations, please contact me.
